

GLADEN ONE 120.2

Optional:
ISO and Quad-Lock Plug & Play
cable.

Excerpts from **autohifi** test report:

A lot of power and **great sound**. Under laboratory conditions the **120.2** puts out 2x 129w rms into 4 ohm which for an amp this size is more than **impressive**.

In the listening test the **Gladden One** collected many points, **very impulsive** and **dynamics** in the bass range whilst the highs and mids were wonderfully **silky** and **delicate**.

The high frequencies of the music played through the **Mosconi** were clean and gave us **goosebumps**, the acoustical room in-front of the speakers and dash came alive...a really good thing.

The valuable features such as **FSA** and High Low Adapter **HLA-2** are on board.

autohifi test result:

- + great features
- + extreme smal size
- + delightful sound
